

Issue #	Task #	Associated User Story	Task Title	Task Description	🕒 Priority	🕒 Risk	👤 Responsible	🕒 Status
22	0	None	Create reusable navigation bar component	Requirements: - Create a navigation bar using HTML and CSS - Include links to pages (Home, Profile more in later sprints) - Ensure the navigation bar is displayed only after user login - Integrate the navigation bar into Express-rendered pages Notes: - The navigation bar will be reused across multiple authenticated pages - It can be made reusable by using ejs files	Medium	Low	Ethan Elkaim	Done
21	1	None	Set up Home page / dashboard	Requirements: - Nav bar (This should be a reusable ejs component from task #0) - Links to all other pages - Accessible only after login (if not logged in then redirect to login page)	Medium	Low	Ethan Elkaim	Done
16	2	US#1	Create registration form UI	Form requirements: - Email/Username (This input should be type="email") - Password (These rules should be visible on the form) - Password must be at least 5 characters long - Password can only contain letters and digits - Must contain at least 1 letter - Must contain at least 1 digit - Submit button - Basic Validation (make sure all field are completed)	High	Low	Martin Miskovski	Done
15	3	US#1	Set up registration backend	- Set up backend for registration form - Do not allow duplicate username - Password rules: - Password must be at least 5 characters long - Password can only contain letters and digits - Must contain at least 1 letter - Must contain at least 1 digit - Save username and password to json file if passes all validation	High	High	Ethan Elkaim	Done
17	4	US#2	Create login UI	Fields needed: - Username: Allow user to enter their username on login page. - Password: Allow user to enter password created on registration page. - Remember me: Allow user to stay logged in when closing website. - Submit: User is able to login once all credentials are entered. (Have basic validation such as all field need to be completed)	High	Low	Marc Urbano	Done
18	5	US#2	Implement login backend	Set up the login logic allowing people that have registered to login. - When someone tries to login it should look through json file and see if username and password match one of the combinations in the json file. If so, then log them in and if not then display error message. - If someone presses remember me then they should not have to log back in if they close the tab. This should be done using cookies. (MaxAge could be 7 days for example)	High	Medium	Kadio Paul-Philippe Ehui	Done
19	6	US#3	Create profile management UI	Fields needed: - Field for diet preferences (this could be maybe just a text feild, or a dropdown or radio button with options like vegetarian or lactose intolerant) - Field for allergies (this could also just be a text field or checkboxes with stuff like nuts, eggs, etc...)	Medium	Low	Kepler Paul-Emile	Done
20	7	US#3	Set up profile management backend	This is to save a user's preferences. - Create backend logic to save and update a user's dietary preferences and allergies - Store user profile data in a json file - Associate saved preferences with a user account - Validate incoming data from the frontend - Return success or error responses - Only update data when user presses save	Medium	High	Chrisjan Alejandro	Done
